

GET FREE INTERNET ANYWHERE

Cameron Showalter • October 2017

What is DNS?

Domain Name Servers (The Internet's Phonebook)

DNS TUNNELING

- Use VPN through DNS to get a file through a firewall
- Use SSH tunneling to get free wifi ANYWHERE!! (That has port 53 open)

NOTE: for this to work, you need a computer with root on BOTH sides of the firewall

Disclaimer:

You should personally own any network you do this to
